## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 21-60 are allowable over the art of record.

Te abstract has been changed to:

- - A computer network and method for electronically trading derivatives. The system includes networks and methods where a control or network managing station in the network acts as a facilitator for the market makers and subscribers to make a trade at an Exchange. In another embodiment the network managing station consummates the trade between a market maker and a subscriber by matching binding quotes and orders and clears the trade at an Exchange. The computer network for electronically trading derivative uses: (a) network managing station; (b) one or more market maker stations; (c) one or more subscriber stations; (d) one or more Exchanges. The network managing station connects market makers and subscribers for making real time indicative quotes, issuing requests for quotes, obtaining binding quotes and wherein the market maker and subscriber are in communication with an Exchange for sending binding quotes and orders to the Exchange for clearing and confirming transactions. - -

2. The following is an examiner's statement of reasons for allowance:

The prior art taken alone or in combination failed to teach or suggest:

“the requestor may cause transmission of the request for an indicative quote for the at least one product via the network to the identified market maker station of the plurality of market maker stations, the remaining of the plurality of market maker stations not receiving the request for the indicative quote, and whereby the identified market maker station may respond to the request for indicative quote with an indicative quote for only the at least one product and the at least identified market maker station may respond to the request for a binding quote with a binding quote for only the at least one product” as recited in independent claim 21.

The prior art taken alone or in combination failed to teach or suggest a function of “enabling communications between the subscriber station and at least the identified market maker station of the plurality of market maker stations such that the subscriber station may cause transmission of request for a binding quote for the at least one product to the at least identified market maker station and the at least identified market maker station may respond with a binding quote only for the at least one product” as recited in independent claim 31.

The prior art taken alone or in combination failed to teach or suggest “third logic stored in the third memory and executable by a third processor to generate the request for identification of the market maker station associated with a market maker interested in quoting for the at least one product of the plurality of products and transmit the request to the at least one network managing station via the network, and cause transmission of the request for an indicative quote for the at least one product to the identified market maker station via the network in response to the enabling of

communications by the at least one network managing station, the third logic being further operative to cause transmission of the request for a binding quote for the at least one product to the at least identified market maker station via the network in response to the enabling of communications by the at least one network managing station" as recited in independent claim 40.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
